Herbicide

ATLANTIS Star

A highly active herbicide (including two sulfonylurea herbicides) with foliar and some root activity against black-grass. loose silky bent, wild-oats, rve-grasses. meadow-grasses, sterile brome and a range of annual broad-leaved weeds in winter wheat and winter triticale

ATLANTIS STAR

UFI: WKV0-N0AF-X00V-5G43

A water dispersible granule formulation containing 45 g/kg mesosulfuron-methyl, 9 g/kg iodosulfuron-methyl-sodium and 22.5 g/kg thiencarbazone-methyl. Also contains mefenoyr-diethyl.

DANGER

Causes serious eye damage.

Very toxic to aquatic life with long lasting effects.

Wear protective gloves/protective clothing/eye protection/face protection.

IF IN EYES: Rinse cautiously with water for several minutes.

Remove contact lenses, if present and easy to do. Continue rinsing. Immediately call a POISON CENTER or doctor/physician.

Collect spillage.

Dispose of contents/container to a licensed hazardous-waste disposal contractor or collection site except for empty clean containers which can be disposed of as non-hazardous waste.

To avoid risks to human health and the environment, comply with the instructions for use.

Bayer

IMPORTANT INFORMATION FOR USE ONLY AS AN AGRICULTURAL HERBICIDE

Crops	Maximum Individual Dose	Maximum Number Of Treatments	Latest Time Of Application
Winter wheat, winter triticale	0.333 kg product/ha	One per crop	Second node detectable (GS 32) of the crop

OTHER SPECIFIC RESTRICTIONS:

This product must only be applied between 1 February in the year of harvest and the specified latest time of application.

To avoid the build-up of resistance do not apply this or any other product containing an ALS herbicide with claims of control of grass weeds more than once to any crop. This product must not be applied via hand-held equipment.

READ THE LABEL BEFORE USE. USING THIS PRODUCT IN A MANNER THAT IS INCONSISTENT WITH THE LABEL MAY BE AN OFFENCE. FOLLOW THE CODE OF PRACTICE FOR USING PLANT PROTECTION PRODUCTS.

SAFETY PRECAUTIONS Operator Protection

Engineering control of operator exposure must be used where reasonably practical in addition to the following personal protective equipment:

AND FACE PROTECTION (FACESHIELD) when handling the product. However, engineering controls may replace personal protective equipment if

WEAR SUITABLE PROTECTIVE GLOVES

a COSHH assessment shows they provide an equal or higher standard of protection. WHEN USING DO NOT EAT, DRINK OR SMOKE.

WASH HANDS AND EXPOSED SKIN before eating and drinking and after work.

Environmental Protection

Do not contaminate water with the product or its container. Do not clean application equipment near surface water. Avoid contamination via drains from farmyards and roads. Take extreme care to avoid drift onto crops and nontarget plants outside the target area.

target plants outside the target area. Since there is a risk to aquatic life from use, users not applying the statutory buffer zone must either themselves carry out or ensure that someone else has carried out a Local Environment Risk Assessment for Pesticides (LERAP) on their behalf before each spraying operation from a horizontal boom sprayer. Users must not allow direct spray from horizontal boom sprayers to fall within 5 m of the top of the bank

of any static or flowing waterbody or available for a period of three years within 1 m of a ditch which is dry at the for inspection to any person entitled to time of application (these distances to exercise enforcement powers under or be measured as set out in the guidance in connection with the Plant Protection documents available from HSE Products Regulations 2011 or the Plant Chemicals Regulation Division's website Protection Products (Sustainable Use) Regulations 2012. (An electronic record and any amendments that are made to

LERAP as justifying the narrower buffer zone are complied with in full and in accordance with any

(a) The LERAP indicates that a narrower

buffer zone will be sufficient; and

(b) Any measures indicated by the

it) unless:

conditions applicable to them.

Spray must be aimed away from water.

The results of the LERAP must be

recorded in written form and must be

for inspection and can be copied). Detailed guidance on LERAPs and how to conduct a LERAP are contained in the guidance documents available from HSE Chemicals Regulation Division's website. All LERAPs must be carried out in accordance with this Guidance and any

will satisfy the requirement for a written record, providing it is similarly available

amendments that are made to it. This product must not be applied via hand-held equipment.

Storage and Disposal

KEEP IN ORIGINAL CONTAINER, tightly closed in a safe place.

KEEP OUT OF REACH OF CHILDREN. KEEP AWAY FROM FOOD, DRINK AND ANIMAL FEEDING STUFFS.

WASH OUT CONTAINER THOROUGHLY and dispose of safely.

PROTECT FROM FROST.

DIRECTIONS FOR USE

IMPORTANT: This information is approved as part of the Product Label. All instructions within this section must be read carefully in order to obtain safe and successful use of this product.

RESTRICTIONS

DO NOT use Atlantis Star on crops undersown with grasses, clover or other

legumes or any other broad-leaved crop.

Only use Atlantis Star in permitted ALS sequences and tank mixes and only in accordance with label recommendations for every product in the sequence or tank mixture.

Atlantis Star must not be applied to any crop suffering from stress as a result of drought, water-logging, pest or disease attack, nutrient deficiency, soil compaction or other factors reducing crop growth.

Ensure that spray swaths do not overlap as this may result in crop phytotoxicity, such as bleaching or stunting. These symptoms are not always transient and may reduce the yield of winter triticale.

Due to the potential for yield loss, sometimes without prior signs of crop phytotoxicity, avoid use of Atlantis Star to control light infestations of grass weeds.

Because some non-target crops are sensitive to Atlantis Star, extreme care is required to avoid drift onto plants outside the target area, or onto ponds, waterways or ditches.

Do not apply Atlantis Star when rain is imminent.

Do not apply during periods of frosty weather.

Store in a safe dry place designated as an agrochemical store.

WEEDS CONTROLLED

This product contains mesosulfuronmethyl, iodosulfuron-methyl and

thiencarbazone-methyl which are ALS inhibitors, also classified by the Herbicide Resistance Action Committee as 'Group 2'. Use only as part of a resistance management strategy that includes cultural methods of control and does not use ALS inhibitors as the sole chemical method of grass-weed control. Strains of some annual grasses (e.g. black-grass, wild-oats and Italian rye-grass) have developed resistance to herbicides which may lead to poor control. A strategy for preventing and managing resistance should be adopted. Guidelines have been produced by the Weed Resistance Action Group and copies are available from the AHDB, CropLife UK, your distributor, crop advisor or product manufacturer.

Weed	Post-emergence susceptibility to 0.2 kg/ha	Post-emergence susceptibility to 0.333 kg/ha
Grass weeds		
Blackgrass	-	MR to GS 25
Brome, sterile/barren	-	MS to GS 32
Loose silky-bent	S to GS 31	-
Meadow grass, annual	S to GS 30	-
Rye-grass, perennial (from seed)	-	S to GS 31
Rye-grass, Italian	-	S to GS 30
Wild oats	-	MS to GS 29

S = Susceptible, MS = Moderately Susceptible, MR = Moderately resistant

hours of application. The actual time taken for herbicidal symptoms to appear and death varies between weed species, timing of application and weather conditions. In some cases symptoms may not be apparent for up to 4 weeks. Optimum grass weed control will be obtained when all grass weeds are

Atlantis Star is readily translocated within

the target weed, inhibiting growth within

after application will not be controlled.

As Atlantis Star is active primarily via foliar uptake good spray coverage of the target weed is essential for optimal efficacy. For optimal activity, apply when weather conditions promote active weed growth. Atlantis Star controls emerged weeds on all soil types.

emerged at spraying. Weeds germinating

Atlantis Star has a moderate residual life in soil under normal conditions. As residual activity is important for optimal activity, avoid application under very dry conditions on to very dry soil. Residual efficacy will be enhanced where seedbeds are fine and moist. High soil temperatures and cloddy seedbeds may reduce the residual efficacy of Atlantis Star. The presence of enhanced metabolism herbicide resistant grasses may lead to unacceptable levels of control. To reduce the risk of developing resistance or where resistance to sulfonylurea herbicides is suspected, applications should be made to young, actively arowina weeds.

- Key aspects of the Atlantis Star resistance management strategy are:
- ALWAYS follow WRAG guidelines for preventing and managing herbicide resistant grass and broad-leaved weeds.
- DO NOT use Atlantis Star as a standalone treatment for black-grass, rye-grass, common chickweed,
- with herbicides with non-ALS modes of action. IDEALLY apply Atlantis Star as early as possible and before GS 31 of grass

common poppy or mayweeds. Use only in tank mixture or in sequence

- weeds.
- DO NOT use Atlantis Star as the sole means of grass weed or broad-leaved weed control in successive crops.

- ALWAYS use grass and broad-leaved weed herbicides with non-ALS modes. of action throughout the cropping rotation.
- ALWAYS monitor weed control effectiveness and investigate any odd patches of poor grass or broad-leaved weed control. If unexplained contact your agronomist who may consider a resistance test appropriate.

CROP SPECIFIC INFORMATION

Winter Wheat and Triticale Apply via a horizontal boom sprayer at a rate of 0.333 kg/ha or at 0.2 kg/ha (according to the growth stage of the target weed(s)). Apply in 200-300 L/ ha as a **FINE to MEDIUM** spray (BCPC category). Use application techniques

which ensure good weed coverage and crop penetration. Spray overlaps in the treated cereal crop should be avoided in order to reduce the risk of localised adverse effects on following crops of

Only one application of Atlantis Star should be made to the crop.

For use on all varieties of winter wheat and triticale. Apply from the main shoot and 1 tiller stage (GS 21) of the crop up

winter oilseed rape. Always use Atlantis

Star in mixture with authorised adjuvant

biopower (ADJ: 0617) at a rate of 1 L/ha.

and triticale. Apply from the main shoot and 1 tiller stage (GS 21) of the crop up to second node detectable (GS 32). This product is authorised in winter sown crops. Growers choosing to apply this product to winter sown spring varieties should note that crop safety has not been demonstrated in

spring varieties. As a result application of this product to winter sown spring varieties is done so at the growers own commercial risk (and this also applies to unclassified varieties).

SEQUENCES & TANK MIXTURES

Only one "ALS inhibiting" herbicide can be applied to the same crop in sequence or in tank mixture with Atlantis Star.

Atlantis Star may be applied to the same crop in sequence or in tank mixture with one of the following "ALS inhibiting" herbicides:

Alias SX	DP911 SX	Nevada	
Ally Max SX	Eagle	Omnera LQM	
Answer SX	Ergon	Presite SX	

Avro SX	Finish SX	Provalia LQM		Counter SX	Lorate	Taxi	
Barton WG	Finy	Quantum SX		Dakota	Mattera	Traton SX	
Biplay SX	Galaxy	Ratio SX		Dingo	Mozaic SX	Zypar	
Boudha	Gartrel	Refine Max SX	* Maximum rate of 0.1 L/ha These sequences and tank mixtures				
Boxer*	GF-184	Renitar		must only be applied in accordance with			
Calibre SX	Gropper SX	Savvy Premium	label recommendations for every product in the sequence or tank mixture and				
Cameo SX	Harmony M SX	Sekator OD	only if used in conjunction with a robust non-ALS inhibitor autumn herbicide programme. This is particularly important				
Chekker	Hunter	Simba SX	where both components are applied			applied	
Chimera SX	Inka SX	Slalom	ı	in the spring. Aside from those listed above, do not use in sequence or tank			
Cleancrop Mondial	Jubilee SX	Spitfire	mixture with any other ALS inhibitors, such as sulfonylureas, unless specifically				
Concert SX	Leystar	Starane XL	permitted on the label for either produc			ther product.	

As part of the Herbicide Resistant Management Strategy for Atlantis Star, do not apply Chekker or Sekator OD in sequence with Atlantis Star for the control of common chickweed in order to avoid increased selection for herbicide resistant individuals.

FOLLOWING CROPS and CROP FAILURE

Wheat, barley, oats, triticale, rye, oilseed rape, field beans, rye-grass, buckwheat, lucerne, vetch, clover and linseed may be sown in the year of harvest to succeed a crop treated with Atlantis Star. Wheat, barley, oats, triticale, rye, oilseed rape, sugar beet, maize, sunflower, peas, beans, linseed, bulb onion and carrot may be

drilled in the spring following harvest of the Atlantis Star treated winter wheat crop. Plough prior to planting crops of oilseed rape, linseed, bulb onion and carrots, otherwise crop damage may occur. 400 days must be observed between an application of Atlantis Star and drilling of carrots. It is recommended to cultivate to a depth of at least 10 cm prior to sowing following crops of winter wheat, winter barley, winter triticale, winter rye, oats, buckwheat, clover, vetch, lucerne, peas and beans.

Where Atlantis Star is applied in tank mixture or sequence with another "ALS inhibitor" herbicide, then all winter cereals, winter oilseed rape, winter linseed, winter field beans and Italian

rye grass may be sown in the year of harvest to succeed a cereal crop treated with Atlantis Star. Plough prior to establishing crops of winter oilseed rape, winter linseed and winter field beans otherwise damage may occur. It is recommended to cultivate to a depth of at least 10 cm prior to sowing following crops of winter cereals. Spray overlaps in the treated crop should be avoided in order to reduce the risk of localised adverse effects on following broad-leaved crops, particularly of winter oilseed rape.

All spring cereals, maize, spring oilseed rape, sugar beet, Italian rye-grass, spring beans, spring field peas, spring linseed, bulb onion and carrot may be

drilled in the spring following harvest

of the Atlantis Star-treated cereal crop. Plough prior to establishing maize, spring oilseed rape, sugar beet, spring beans, spring field peas, spring linseed, bulb onion and carrot, otherwise crop damage may occur. 400 days must be observed between application of Atlantis Star and drilling of carrots. It is recommended to cultivate to a depth of at least 10 cm prior to sowing following crops of spring cereals. In the event of crop failure for any reason, plough and sow only winter or spring wheat in the same cropping season as an application of Atlantis Star and only when there has been at least a 7 week interval between application and establishment of the replacement

crop.

Where Atlantis Star is applied in sequence or tank mixture with other permitted "ALS inhibiting" herbicides, always follow the most restrictive label with regard to following crops and cultivation requirements for crop establishment.

MIXING

Add the recommended quantity of Atlantis Star to the spray tank half-filled with the required quantity of clean water. Add the remainder of the water with the sprayer agitation system in operation. Maintain agitation during

mixing and loading and until spraying is complete. Do not leave the sprayer standing with chemical in it.

To avoid subsequent damage to crops other than winter wheat it is important that the spray tank, boom, hoses, filters and nozzles are thoroughly washed out to remove all traces of Atlantis Star immediately after spraying using a proprietary sprayer cleaner (e.g. All Clear Extra®) according to the label instructions for that product.

Atlantis is a registered Trade Mark of BayerBayer CropScience 2025
