

DK EXEDGE

DK Exedge is the NEW top-performing RL Candidate from DEKALB. The hybrid, brings an excellent agronomic package, with highlights such as RLM7 & RLMS *phoma* resistance and super rapid vigour to mitigate challenging conditions.

VITAL STATISTICS

NL1 & NL2 GROSS OUTPUT AVERAGE	5.28 t/ha
NL1 & NL2 OIL CONTENT AVERAGE	46.1%
DEKALB GROSS OUTPUT 2024	5.22 t/ha
DEKALB OIL CONTENT	47.1%
RESISTANCE TO LODGING	Excellent (9)
STEM CANKEK RESISTANCE (RLM7 & RLMS)	Excellent (8)
LIGHT LEAF SPOT RESISTANCE	Excellent (7)
TUYV RESISTANCE	R
POD SHATTER RESISTANCE	R

NL1 & NL2 Data + NIAB & Scottish Agronomy Replicated Trials Data
2023-24 - 3 Sites

MAIN ATTRIBUTES

- Recommended List Candidate in the North 2024/25 Season, excelling versus key controls in both NL1 & NL2.
- Exceptional environmental resilience from a very high yielding, high oil hybrid with a robust all-round agronomic package.
- The greatest ability to withstand pest and weather challenges courtesy of its flexible drilling, excellent early vigour with rapid autumn development.
- The greatest crop protection flexibility with a first-class disease package, including triple *phoma* (RLM7 + RLMS) resistance, excellent light leaf spot resistance and TuYV resistance.
- Fast early spring regrowth for the most reliable compensation for winter weather and pest damage.
- Excellent harvest strength and manageability from a combination of excellent standing power and DEKALB pod shatter resistance.

KEY TRAITS

VIGOROUS ESTABLISHMENT

Robust initial root and shoot growth for the most reliable and even establishment.

RAPID AUTUMN DEVELOPMENT

Faster-than-average development for the most rapid growth away from flea beetles and other autumn challenges.

TRIPLE PHOMA RESISTANCE

RLM7 + RLMS supported by polygenic resistance for the most durable phoma/stem canker protection and greatest spraying economy and flexibility.

TuYV RESISTANCE

Effective resistance to Turnip Yellow Virus for extra insurance against aphid-borne infections and greatest spraying economy and flexibility.

POD SHATTER RESISTANCE

Pioneering genetic resistance to pod shattering for the least seed shedding up to and at harvest and the greatest flexibility in harvest timing.

HIGH OIL

Higher-than-average oil content to maximise gross output for added market returns.
