

DKC2742

A top performing early maturing maize variety for biogas production

FAO
190

FIELD
SHIELD

BENEFITS

Early vigour

Rapid and reliable establishment regardless of sowing date.

Biogas performance

Flint to flint-dent grain for the best combination of fermentable energy and agronomics making DKC2742 suitable for biogas production.

Field Shield

DKC2742 is bred with DEKALB Field Shield giving excellent tolerance to abiotic stress and disease resistance, such as Eyespot & Fusarium.

Strong stalks

Strong resistance to root and stalk lodging for reliability under challenging conditions.

Stay Green

Large flat leaves and the Stay Green characteristic allows for maximum sunlight absorption and a wider harvesting window.

AGRONOMIC PROFILE

18 kernels /
cob average

32 Kernels /
cob average

Cell Wall Digestibility*

56.5%

19.5 t/ha

Dry Matter Yield*

31.1%

Starch Content*

*BSPB 2025/2026 Forage Maize Descriptive List.
Second choice varieties for favourable sites.

HOW WE SELECT THE FIELD SHIELD HYBRIDS

AREAS OF GREATEST RISK

We assess the major risks for each area, both abiotic (such as stalk or root lodging, drought), and biotic (insects or fungi such as ECB or Fusarium)

EVALUATION OF DEKALB®

Hybrids with advanced genetics with high yield potential

HYBRIDS WITH THE BEST TOLERANCE

We select the finest hybrids with the best tolerance to the risks in each area and the best yield potential in good conditions
