

DKC3218

A top performing early maturing maize for biogas and livestock production

FAO
200

BENEFITS

High DM yields
with early maturity for maximum output across a wide range of environments.

Biogas performance
Flint to flint-dent grain for the best combination of fermentable energy and agronomics.

Starch and digestibility
High starch content and good cell wall digestibility for the highest metabolisable energy yields.

Early vigour
Exceptional early vigour for rapid and reliable establishment regardless of sowing date

Strong stalks
Strong resistance to root and stalk lodging for reliability under challenging conditions.

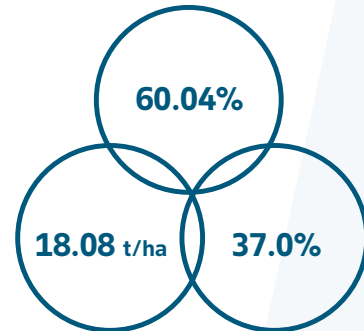

Stay Green
Leaf senescence for the widest top quality harvesting window.
